Gradle 插件

1. 标准插件 https://docs.gradle.org/3.3/userguide/standard_plugins.html
   调用方法：apply plugin: "java"
2. 第三方插件 https://plugins.gradle.org/
   调用方法：

Build script snippet for use in all Gradle versions:

```
buildscript {
  repositories {
    maven {
      url "https://plugins.gradle.org/m2/"
    }
  }
  dependencies {
    classpath "gradle.plugin.com.redpillanalytics:checkmate:7.3.7"
  }
}

apply plugin: "com.redpillanalytics.checkmate.core"
```

Build script snippet for new, incubating, plugin mechanism introduced in Gradle 2.1:

```
plugins {
  id "com.redpillanalytics.checkmate.core" version "7.3.7"
}
```

3. 自定义插件
